DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to portable information apparatus comprising a liquid crystal device, classified in class 349, subclass 56+.
 - II. Claim 16, drawn to a film liquid crystal device, classified in class 257, subclass 59.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the portable information apparatus does not require the liquid crystal device to be a film liquid crystal device, while the film liquid crystal device need not be portable.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 FR 1.143).

In the event Applicant elects the device rather than the method of making the device this application contains claims directed to the following patentably distinct species of the claimed invention: First Embodiment (Figures 1-2 a/o); and Second Embodiment (Figure 8).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim appears to be generic.
